I. EDUCATION

College of William & Mary

M.S., Computational Operations Research

Williamsburg, VA

Sep 2025 – May 2027

- Full tuition waiver and merit-based Teaching Assistantship.

College of William & Mary

B.S., Computer Science; Minor in Art & Design

Williamsburg, VA

Sep 2022 – May 2025

II. EXPERIENCE

Tenth Global Wordspace · local-first HTML document tool built for AI agents as first-class users wordspace.ai

Remote

AI Agent Intern

Apr 2026 – Present

- Drove an Electron desktop product from definition to signed release — 400+ merged PRs, 58 code-signed and Apple-notarized macOS and Windows builds with in-app auto-update, shipping every ~2 days.
- Designed a delivery architecture that AI agents run unattended: after a human confirms intent and acceptance criteria, agents plan, implement, self-review, commit, and open the PR inside an isolated container, with CI as the authoritative gate — runs go for hours with no human input.
- Built the collaboration model and acceptance standard for dozens of parallel AI sessions: a shared knowledge ledger as the only cross-session channel, thresholds written by humans and off-limits to the implementing agent, and independent agents adversarially cross-checking to catch features that break while tests still pass.

Waveform.ai W&M music × physics project putting a custom AI on stage with live musicians waveformai.wm.edu

Williamsburg, VA

Product Manager Intern

Sep 2024 – Apr 2025

Virginia Dept. of General Services State agency for procurement and public services

Virginia, USA

Web Marketing Intern

Jun 2024 – Aug 2024

Utopilot (SAIC Motor) SAIC Motor's autonomous driving subsidiary

Shanghai, China

Product Development Intern

May 2023 – Aug 2023

- Profiled and optimized data query paths and the caching layer — 40% lower latency, 90% fewer manual operations; delivered 3 custom Java projects end to end.

III. MY OWN PRODUCTS

Both started, built, and grown by me — with AI in the loop.

Favly Taste-sharing profiles for film, books, and games favly.me

Solo Founder — Product, Engineering, Growth

Oct 2025 – Present

- Built and shipped a full-stack social product solo — React / Next.js frontend, Supabase (PostgreSQL) backend — covering auth, cross-category search, public profiles, and mobile.
- Rebuilt the auth state machine with automatic 401 refresh-and-retry; designed the data model and migrations, separated prod/dev environments, and fixed RLS policies breaking data access.
- Shipped with AI throughout the loop, turning ideas into released features in days; 1,000+ active users in 3 months and running in production since.

TLDR Bilingual Tech Newsletter Daily English-to-Chinese tech news digest (email + WeChat) tldrnewsletter.cn

Solo Founder — Product, Engineering, Growth

Nov 2024 – Present

- Built a fully unattended content pipeline (LLM APIs + Make): daily scraping of English tech sources, LLM translation and structuring, automated fan-out to email and WeChat — running daily for over a year.
- Designed prompt and output schemas that keep results structurally consistent across sources, so a malformed source can't poison the day's batch.
- Owned everything from product definition through pipeline engineering to distribution; serving 4,500+ subscribers.

IV. SKILLS

Languages

TypeScript / JavaScript, Python, Java, SQL

Desktop & Frontend

Electron, React, Next.js, Vite, Node.js

Testing & CI

Playwright (Electron E2E), node:test, GitHub Actions (matrix sharding, required checks), mutation testing

AI Engineering

Multi-agent development pipelines, Claude Code, MCP, Agent Skills, LLM API integration

AI Usage

Claude Max user — ~\$15K in equivalent model usage over the past 6 months

Data & Delivery

PostgreSQL / Supabase (modeling, migrations, RLS), Apple code signing & notarization, electron-builder / updater, Vercel, Git
